

Synchron Table Light

The ST Light scanner has been especially developed to meet special requirements of the ceramic and decor industry

Its magnetic copy board can carry objects with a weight of up to 150 kg. A light correction program allows to scan originals of different thicknesses.

The LED light system, together with the CRUSE professional ICC profile, guarantees best scanning results with the highest color fidelity you can get. Even more, using special light modes, like texture effect or light angle device, to capture the surface of objects in astonishing naturalness.

The fixed scan resolution for a maximum scan size of 84 x 120 cm is 300 / 600 ppi. Using CRUSE Image Stacking software you can generate fascinating results by mixing images captured in different modes.
